

Press release

Thursday 17 March 2016

BOUYGUES CONSTRUCTION AND ITS PARTNERS ARE TO DESIGN AND CONSTRUCT AN EXTENSION TO THE PORT OF CALAIS, EUROPE'S SECOND LARGEST PASSENGER PORT

The Dover Strait Ports Company (Société des Ports du Département) has awarded the design-build contract for the Port of Calais extension project to a consortium formed around Bouygues Travaux Publics (the lead company), Colas Nord-Picardie, Spie Batignolles and Jan De Nul. This contract, which forms part of the Calais Port 2015 project, is worth approximately €675 million. The share of Bouygues Construction will be approximately €300 million.

Philippe Amequin, CEO of Bouygues Travaux Publics, said: "We are very pleased to have the opportunity to play a part in the economic development of Nord - Pas de Calais - Picardie region with this project, which will provide it with a port infrastructure corresponding to its ambitions, both in terms of functionality and of quality of service. Our teams have been at work since the contract was signed, and they are already at the site carrying out the engineering studies that will result in the construction of a state-of-the-art port."

Located in the heart of one of the world's busiest economic areas, the Port of Calais is the leading French port and the European's second largest passenger port. In order to raise its capacity, which is currently insufficient, the Nord - Pas-de-Calais - Picardie region decided to modify its port infrastructure to meet to the new levels maritime traffic, launching a consultation in view of a public service delegation contract for the operation of the ports of Boulogne-sur-Mer and Calais for a period of fifty years.

The Dover Strait Ports Company has signed a design-build contract for the modernisation of the Port of Calais with a consortium led by Bouygues Travaux Publics. This project includes:

- the creation of a new 3-kilometre seawall along with a new 100-hectare harbour basin to the north of the current facilities;
- the construction of three new ferry berths and a roll-on/roll-off berth inside the harbour basin;
- 4 million cubic metres of marine dredging to constitute the new quays;
- the development of new cross-Channel traffic reception capacities including 44 hectares of parking facilities and roads as well as roughly twenty operational and reception buildings.

The Calais Port 2015 project stringently applies the commitments to protect flora and fauna given to the French National Council for the Protection of Nature by the Nord – Pas-de-Calais – Picardie region. It will incorporate a resting place for birds and an observatory for ornithological monitoring. Artificial habitats and nurseries for marine wildlife will also be provided both along the seawall and within the port.

As a global player in construction and services, Bouygues Construction designs, builds and operates buildings and structures which improve the quality of people's living and working environment: public and private buildings, transport infrastructures and energy and communications networks. A leader in sustainable construction, the Group and its 50,100 employees have a long-term commitment to helping their customers shape a better life. In 2015, Bouygues Construction generated sales of €12 billion.

BOUYGUES
CONSTRUCTION

Shaping a Better Life

In order to minimise energy consumption during the operating phase, centralised production of heat and cold, provided by a seawater heat pump, will supply the entire port. The buildings will also be equipped with a source of wind energy.

Bouygues Construction has developed extensive expertise in designing and constructing port installations. The Group was responsible for building the Tangiers Med complex in Morocco, consisting of three harbours undertaken between 2003 and 2014. In 2011, it handed over the Busan port in South Korea, the world's fourth largest container port. It was selected in 2015 to design and build the new offshore urban extension in Monaco.

About the Dover Strait Ports Company (Société des Ports du Détroit)

The Dover Straits Ports Operating Company (Société d'Exploitation des Ports du Détroit) has held the concession for the ports of Calais and Boulogne-sur-Mer since July 22, 2015. Its majority shareholders are the Côte d'Opale Chamber of Commerce and Industry and the North of France Regional Chamber of Commerce and Industry. It has concluded a sub-delegation contract for the purposes of the construction and financing of the Port of Calais extension with the Dover Strait Company (Société des Ports du Détroit), formed by the above Chambers of Commerce and Industry, the Port of Dunkirk, the Caisse des Dépôts et Consignations (40%) and Meridiam (40%).
